

Home Theater

The Mobile Theatre System with QSurround, available exclusively from RiverPark, Inc., is the only hometheater system designed and engineered specifically for RV's. The amplifier design utilizes active frequency equalization to optimize performance from stylish cube speakers, including a center channel, and hide away sub-woofers. A Q-Surround processor decodes stereo matrix material to deliver dynamic cabin filling home theater sound unrivaled in the industry.

**If you want the home theater experience on the go,
then MTS w/ Q-Surround is for YOU!!**

System Features & Benefits

- QSurround decodes audio output signal from the TV/Video source to create 5.1-channel surround sound.
- DHS designed active frequency equalization compensates for the interior of the vehicle
- 12 Volt platform allows for simple system integration
- Specially designed cube speaker bracket withstands the rigors of the mobile application yet adjusts without tools
- System design utilizes proprietary computer software and engineering techniques
- Integral source selector allows for inputs from TV/VCR/DVD/and dash radio
- DHS internal circuitry prevents distortion at high volumes
- Special Internal Circuit automatically turns Amplifier Module on and off
- All components comply with GM, Ford, and Chrysler quality testing
